Nicholas Cerisano

Toronto, Ontario | cell: 416-556-4060 | cerisano.nicholas@gmail.com | github.com/EpicNicks

Profile

A talented, creative, and results-driven software developer with high proficiency across multiple programming languages and frameworks. A tech-savvy self-starter that keeps abreast of innovations in software development in agile work environments. A versatile team player with strong interpersonal skills and experienced with working with diverse cross-functional groups.

Skills and Certifications

- Strong interpersonal communication skills honed through formal competitive debate and public speaking, as well as through teamwork with many diverse work teams
- Highly proficient in C#, JavaScript, TypeScript, and Java; proficient in C, C++, Python, Go, F#, Dart, and MATLAB programming languages; SQL, as well as HTML and CSS markup languages.
- Experienced with frameworks: Docker, Spring Boot, Node.js, React, Redux, Express, Bootstrap, Xamarin, SQLite, Flutter, Android Studio
- Highly knowledgeable in Unity Engine for the creation of games
- Strong project management skills: efficiently delegates, organizes and manages tasks during team projects to consistently meet work requirements and deliver on time
- Proficient in Microsoft Office suite

Education

York University **|** *September 2018 – April 2022*

- *Specialized Honours Bachelor of Computer Science*
  - Courses include: Machine Learning, Advanced Data Structures and Algorithms, Advanced Software Design, Database Systems
- Recipient of *York University Entrance Scholarship*

Work Experience

Software Developer Intern | Moneris | May 2021 – August 2021

Responsible for the rewrite for an internal software using agile development practices GitLab and JIRA, participated in daily SCRUM meetings. Performed Full Stack development on a Java Spring Boot backend connected to a Microsoft SQL Server database, and React.JS frontend using TypeScript, material-ui, and unit testing with React Testing Library and Jest.

- Proposed and operationalized the use of typescript for ensuring compile-time program correctness.
- Developed typescript code using React functional components and hooks.
- Synchronized sprint development goals through daily team communications.
- Maintained and merged GitLab issue branches into upstream development branches.

Technology Intern | Moneris | May 2019 – August 2019

Responsible for Quality Assurance testing of the Moneris Risk Database (MRD) website. I coded test cases that performed regression tests to simulate/replace a human QA tester. The regression tests are written in JavaScript using the frameworks Jest and Puppeteer.

- Wrote asynchronous JavaScript code for use in test cases.
- Performed manual testing and bug reporting on the MRD project's GitLab page.
- Maintained my own GitLab branch dedicated to automation testing.

In-Class Projects

Working with a small team, lead several game development projects created with Unity. As the main programmer, supervised development integrating all core systems. Received high academic achievement of A+ in all assignments.

Personal Projects

My online portfolio was created with the React framework, using TypeScript. The portfolio contains examples my best personal projects, including one of my early games that is embedded into the page.

I developed a React app to play movies and tv series, that uses TMDB (The Movie Database) for metadata such as movie posters, ratings, and descriptions, and provides a tool for the generation of metadata files to be used in the backend. User session data – such as the last viewed episode, most recently viewed title, movie playback time, etc. – is stored locally for subsequent usage.

I chose to create a simple backend written with Node.JS and Express in JavaScript that serves video metadata as well as provides video streams.

Other Interests and Activities

- Creating and playing video games from a game designer's perspective
- Watching videos on advanced computer programming
- Working out and competing in Brazilian Jiu-Jitsu
- Reading textbooks and write-ups on different complex computer programs such as compilers
- Competitive sports and activities including swimming, playing hockey, baseball and paintball
