PROFESSIONAL SUMMARY

Full-Stack Software Developer

Full-Stack Software Developer with 4+ years building and maintaining high-availability web applications in the payments and fintech industry. Works across React and TypeScript front ends and Java Spring services on Azure, with a focus on system performance, reliability, and developer workflow. Led a cloud migration that raised application uptime from 99.5% to 99.99% and mentored junior developers while setting team-wide coding standards. Specialized Honours B.CS. and Microsoft Certified Azure Fundamentals (AZ-900).

CORE COMPETENCIES

Agile team leadership and cross-functional collaboration • Technical mentorship and onboarding • System design and architecture • Stakeholder communication and presentation • Code-quality standards and peer review • Analytical problem-solving • Ownership and self-starter mindset

TECHNICAL SKILLS

Languages: C#, C++, C, Python, Java, JavaScript, TypeScript, Kotlin, Dart, Go, SQL, MS SQL Server, PostgreSQL, MongoDB, GraphQL

Frameworks & Tools: React, Redux Toolkit, Spring Boot, REST, Kafka, Node.js, Docker, Kubernetes, Redis, Unity, Flutter, WPF, GitHub Copilot, Claude Code, OpenGL, NVIDIA PhysX, SFML.NET

Cloud & DevOps: Azure, AWS, IIS, Git, CI/CD, JIRA, SonarQube

Testing: Unit, Integration, API, E2E, ReadyAPI, Postman, Puppeteer, Jest, JUnit, Mockito, NUnit, GoogleTest

EXPERIENCE

Intermediate Full-Stack Developer II

Method CRM

Jul. 2026 – Present

Toronto, ON, Canada

Full-stack developer on the Admin Tools development team for a B2B SaaS CRM platform, working in a .NET / IIS environment supporting a multi-tenant architecture where applications provision per-user MongoDB and MS SQL Server databases for customer-specific field customization. Uses agentic engineering practices (Claude Code) as part of the team's core workflow, with architectural responsibility across the admin tools platform and upcoming involvement in a URL shortener service.

- Contribute to architectural decisions for a multi-tenant admin tools platform within a .NET / IIS stack, where applications provision per-user MongoDB and MS SQL Server databases to enable customer-specific field customization.
- Apply agentic engineering practices using Claude Code to accelerate implementation and review, as part of a broader shift toward AI-assisted software development.
- Use Docker to containerize services for local development and testing, and Postman for API testing and validation.

Software Developer II

Moneris

Nov. 2023 – May 2026

Toronto, ON, Canada

Worked in a full-stack capacity with ownership and accountability over several business domains of technical subject matter expertise, including multiple Java Spring Azure cloud functions and two major full-stack web applications in a Java Spring, React TypeScript, Redis, and MS SQL tech stack. Worked in an Agile environment with daily standups and a bi-weekly sprint cycle, tracking work and managing delivery through JIRA, collaborating with senior developers and stakeholders to deliver evolving business requirements.

- Led a 4-person agile team to redesign and modernize a full-stack critical internal business application, improving uptime from 99.5% to 99.99% by migrating to Azure cloud as part of a greater cloud modernization initiative.
- Drove 5 modernization projects migrating legacy EJB processes to Java Spring and Azure cloud CI/CD deployment pipelines, prioritizing maintainability and reducing incidents by 60% per month on average.
- Collaborated with business users of an internal disputes case management UI to deliver features and more efficient interfaces, enabling users to resolve 15% more cases per week compared to the legacy system.

- Maintained 90%+ full-stack test coverage as reported by SonarQube using JUnit and Mockito for Java services and Jest for the React frontend.
- Established coding standards and conducted code reviews, improving consistency and developer experience across the team.
- Mentored 2 summer interns on code quality practices and subject matter knowledge, accelerating their onboarding time by 2 weeks.

Software Developer I

Apr. 2022 – Nov. 2023

Moneris

Toronto, ON, Canada

Developed and maintained full-stack features for internal case management and fraud reporting applications in a Java Spring backend with MS SQL database and React TypeScript frontend. Collaborated in an Agile team environment with senior developers, product owners, and stakeholders to deliver evolving business requirements, managing work through JIRA from ticket creation to deployment, while maintaining high code quality and test coverage.

- Self-pitched and led full-stack rewrite of a legacy application, initially collaborating with two backend developers on the Java Spring and MS SQL layer before taking sole ownership of the entire stack including the React TypeScript frontend, delivering new features end-to-end.
- Increased API reliability by 25%, reduced manual testing by 90%, and cut production defects by 30% through automated API testing using ReadyAPI.
- Improved API performance by 50% by introducing RTK Query for client-side caching, reducing redundant API calls
- Supported and mentored interns and new hires.
- Promoted to Developer II in 18 months vs. 24-month average, recognized for code quality and initiative

Software Developer Intern

May 2021 – Aug. 2021

Moneris

Toronto, ON, Canada

Worked alongside senior developers and fellow interns to deliver features in a full-stack capacity in Java Spring for the backend and React with JavaScript, later replaced with TypeScript, for the frontend.

- Advocated TypeScript adoption, preventing 5–10 potential issues per sprint; offered full-time role after internship.
- Created and delivered presentations on modernizing the team's frontend codebases, convincing senior developers to adopt TypeScript and pivot away from JavaScript.

Software Developer Intern

May 2019 – Aug. 2019

Moneris

Toronto, ON, Canada

Learned and applied Puppeteer.js to create an end-to-end automated testing suite leveraging Jest.js for internal web applications such as Moneris Risk Database, MRD.

- Sole developer of JavaScript E2E automation suite using Puppeteer and Jest, growing coverage from near-zero to 90% of critical MRD user flows and reducing regression testing from 2 days to 2 hours per release cycle.
- Proactively identified and reported edge case defects in complex user flows to the development team, improving pre-release defect detection and reducing risk of issues reaching production.

EDUCATION

York University, Lassonde School of Engineering

Toronto, ON, Canada

Bachelor of Computer Science, Specialized Honours

- Awarded academic entrance scholarship
- Hackathon participant; returned as a Hackathon mentor (November 2025)

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900) – 2022

PROJECTS

CaloriesIn • Flutter Mobile Calorie Tracker • github.com/EpicNicks/Calories-In-SimpleCalorieCounter-

- Mobile app for tracking caloric intake, setting goals, and monitoring progress. Data is stored locally in a SQLite database with an option to export personal data in CSV format.
- Written in Dart using the Flutter framework, leveraging Kotlin for areas requiring native Android capabilities, targeting Android devices with a clean and intuitive user interface.

N2Engine • C++ Game Engine • github.com/EpicNicks/N2Engine

- Integration with Nvidia PhysX and OpenGL for physics and graphics rendering systems.
- Applied lessons from developing NEngine in C# to the architecture of N2Engine.
- Modern C++23 design patterns for memory safety and performance.

NEngine • C# Game Engine + Editor • github.com/EpicNicks/NEngineEditor

- Designed Unity-inspired object/component system for flexible, maintainable architecture.
- Built event-driven MVVM architecture WPF editor with content browser, inspector, and scene tools for games.
- Enabled runtime property reflection; optimized update loop using SFML.NET.
